

Dr. Martina Modic

Josef Stefan Institute, Slovenia

Dr. Martina Modic is a researcher at the Department for Gaseous Electronics (F6) at "Jozef Stefan" Institute Ljubljana, Slovenia. She leads a Plasma-Bio group within the department. She graduated from Microbiology at Biotechnical faculty at University of Ljubljana, Slovenia. She finished her PhD in Biotechnology at Biotechnical faculty, University of Ljubljana, Slovenia in 2012. Her research efforts are focused in the use of cold atmospheric pressure plasma technology for different applications in biomedicine, microbiology, biomaterials, agriculture and wastewater management. Her research includes plasma-surface and plasma-liquid interactions and the interaction of plasma species with biological materials. Her biography contains 56 scientific papers in leading international journals.
